As a new or experienced player, it’s your musical imagination that will open up new experiences and dreams.

Our responsibility with Trevor James flutes is to listen, measure, design and create a flute that will allow you to reach your true musical potential.

There is nothing like finding the instrument that feels right for you. A flute with an outstanding range of tonal colours and textures.

It therefore gives us great pleasure to welcome you to ‘Our World’.

‘Making life sound beautiful™’
Established in London in 1979, Trevor James flutes have become the leading English flute brand on the international stage.

Trevor James concert, alto and bass flutes blend traditional flute manufacturing techniques with a modern approach to design consultation with leading artists, teachers and musicians of all abilities and ages from around the world.

A handmade flute remains the ultimate investment for any player. Drawing on decades of experience in design and manufacture, the Trevor James Recital flutes along with the Trevor James bass combines traditional techniques for soldering tone holes and pointed key arms, with a highly responsive mechanism and Japanese tubing.

The Trevor James Performers Series concert and alto flute models fit perfectly between our commercial and handmade models. A hand finished CT cut headjoint enhances tonal colour options and performance potential whilst the finest body tubing, combined with hand worked pointed key arms and a heavy-weighted crown (concert flute models), give a player the extra individuality expected from a high quality Conservatory flute.

The multi-award winning Trevor James 10x is the perfect introductory instrument for any new musician. Each hand finished CS headjoint is designed to enable new players to quickly achieve strong and flexible sound production which encourages long-term enthusiasm for flute study.

Whether it’s a piccolo, concert, alto or bass, you can be assured Trevor James flutes will provide the perfect match for your musical development and performance.
